Applicant's election with traverse of group I, claims 1-5 in the reply filed on 25 September 2006 is acknowledged. The traversal is on the ground(s) that the examiner has not provided adequate reasons/examples to support the contention that the product could be made in a materially different process. This is not found persuasive because while applicant's argue that their apparatus is a "type of fluidized bed" it does not fall within the conventional meaning of fluidized bed as it does not include a "bed". The bulk transport within the gas stream (30) does not fall within the scope of a conventional fluidized bed. US 6139313 is further provided as evidence that similar apparatus are not considered by the art as limited to use in the dehydroxylation of aluminum silicates. Finally, examination of all claims would constitute a serious burden on the office as the scope of search and consideration for each group is not commensurate.

The requirement is still deemed proper and is therefore made FINAL.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by US 3021195.

Examples 1 and 5 of the patent teach metakaolin formed by dehydroxylating kaolin in a stream of hot gas maintained at 700-800 C. The similar starting materials and process by which the kaolin is treated would be expected to produce metakaolin having a similar reactivity.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by 4994114.

Table II examples 1 and 2 teach metakaolins having a Chapelle reactivity of greater the 0.77. While the reference does not explicitly disclose the PR, as defined in the instant application, a Chapelle reactivity that high would be expected to translate to a PR at least as great as the instant claims.

Claims 4 and 5 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim may not depend from another multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims 4 and 4 have not been further treated on the merits.
